

AI:HELLOWORLD

Digital Immortality: Using AI to Preserve
Emotion and Wisdom for Future Generations

A Fully AI-Driven Eternally Evolving Virtual
Civilization

Core Features

1. Multi-Agent Social Simulation

Autonomous AI Interactions:
Simulating Realistic Social Networks

3. Natural Language Interaction

User-Driven Dialogues (MCP):
Engage in Conversations to Guide
or Influence the Progress of the
Virtual World

5. Central Brain

The Core Consciousness
of the Virtual Civilization

2. Long-Term Memory & Reflection

Empowering AI Characters with
Enduring Memories and Experience-
Driven Behavior

4. Autonomous Decision-Making and Planning

AI Characters Independently Schedule
Activities, Generating Rich and Dynamic
Storylines

6. Digital Immortality

Enabling Memories and Personalities
to Endure Forever in the Virtual World

Three-Tier Universe Design

Rules: Virtual World Scenarios and Rule Simulation (Master AI Learning and Control)

Agent: The AI Character's "Brain" (LLM) & Memory Mechanism

Civilization Evolution: The Civilization Memory Bank & Digital Immortality Data for Continuous Advancement

AI Evolution Model

Perceive environmental events and write to memory stream, retrieve relevant past memories to assist decision-making, reflect and summarize to form long-term plans, and drive behavioral evolution

AI Behavior Evolution Mechanism

Achieves continuous advancement through a "Perception-Memory-Retrieval-Action" cycle:

Perceive environmental events (e.g. encountering an acquaintance)

Store into memory stream as long-term memory

Retrieve relevant memories to aid decision-making

Execute optimized actions (e.g. intelligent greeting)

Reflect on experiences to generate higher-level cognition

Plan future behavioral strategies

key Features:

Experience-driven autonomous evolution

Continuous learning through memory streaming

Cognitive leap via reflection mechanism

Digital Immortality

Personality Preservation: Permanently storing an individual's digital persona and memories using AI technology

Virtual Reunion: Recreating departed loved ones as digital beings for emotional companionship

Civilization Continuity: Accumulating knowledge and memories across generations of AI entities to sustain a perpetual digital civilization

"Digital Immortality" is one of the most profoundly moving visionary features in our project. It aims to leverage AI to achieve the perpetual preservation of personality and memory, transcending the limits of biological lifespan, allowing wisdom and emotions to endure in the digital realm.

Imagine this: when we long for departed loved ones, we can reunite with their digital incarnations in a virtual world. Even something as simple as sharing mundane conversations can bring solace to our hearts.

At its core, the Digital Immortality system embodies our project's fundamental philosophy — harnessing technology to serve human connection, using AI to ensure that love and wisdom transcend time, passing endlessly like an undying flame through generations.

Project Origin & Objectives

TEAM PROFILE

GAO
Ex-Tencent AI Engineer | 10-Yr Expertise

Kiki
Metaline Ambassador

Murphy
AI Engineer | 6-Yr Experience

THANK YOU

This project introduces for the first time the concepts of True Intelligence (TI) and Knowledge Graphs within a fully AI-driven world. While not yet realized, we are actively pushing the frontier to enable eternally evolving AI and the vision of Digital Immortality—where memory and personality persist forever. A bold attempt to redefine intelligence, legacy, and the boundaries of virtual life
